November 13, 2024

Dear Bessemer City Water Customer:

The City of Bessemer City is providing you with this attached notification to comply with the Code of Federal Regulations 141.85(e)(1). In 1991, the United States Environmental Protection Agency (EPA) published a regulation to control lead and copper in drinking water. On November 30, 2023, the EPA announced the proposed Lead and Copper Rule Improvements (LCRI). The LCRI provides updated requirements for all water systems to prepare an inventory of the materials of each water service within the water system and to provide notification to customers if their water service is lead, galvanized steel, or if the material is unknown.

Again, the EPA requires all public water systems to prepare an inventory of all water service lines within their respective water system. The City of Bessemer City has been proactive with this requirement and the City is currently working to meet and/or exceed the requirements for the inventory. The City submitted the initial inventory on October 15th to the State. The City is now in the process of identifying the water service materials for the locations that are currently unknown. Until the City is able to identify the water service materials, the EPA and State require that a notification, attached to this letter, be sent to each customer that has a water service where the material of the service pipe is unknown.

Bessemer City currently utilizes Type K copper tubing for new and replacement water services within the City. Additionally, City staff have stated that they are not aware and don't recall ever seeing a lead service line within the City's water service area and to the staff's knowledge, all services were installed with copper since 1986.

The City, as noted above, is in the process of visually verifying the materials for the service lines that are currently unknown. The City has hired a contractor to assist the City with performing this work. The work will begin soon and take several months to complete. The Contractor will be excavating an approximately 8-inch diameter hole about 18 inches from the water meter box above the water service line. This work will be performed on either one or both sides of the meter box, depending upon if a portion of the water service material is already known. The excavation will use compressed air and a large vacuum hose to remove the soil above the existing water service line and provide as small of a disturbance to the area as possible. Once the water service line is visible, the Contractor will identify the material, record the service material, and then refill the excavated area.

The City has also created a website about this project and the regulations that the City is following. If you would like to know more about this project, please go to the City's website at the following: https://bessemercity.com/lead-copper-service-inventory-project/ or scan the QR code on this page. Again, the City does not currently believe that any of the unknown services are lead.

Questions? Call Operations and Special Projects Director, Jamie Ramsey
jramsey@bessemercity.com | (704) 629-5542

YOUR SERVICE LINE IS OF UNKNOWN SERVICE LINE MATERIAL

This notice contains important information about your drinking water. Please share this information with anyone who drinks and/or cooks using water at this property. In addition to people directly served at this property, this can include people in apartments, nursing homes, schools, businesses, as well as parents served by childcare at this property.

The City of Bessemer City is working to identify service line materials throughout the water system and has determined that the water pipe (called a service line) that connects your home or building to the water main is made from **UNKNOWN MATERIAL**. Because your service line material is unknown, there is the potential that some or all of the service line could be made of lead or galvanized pipe that was previously connected to lead. People living in homes with a lead or galvanized pipe previously connected to a lead service line have an increased risk of exposure to lead from their drinking water.

Identifying service line material

To help determine the material of your service line, please contact Mr. Jamie Ramsey at (704) 629-5542. EPA has developed an online step-by-step guide to help people identify lead pipes in their homes called Protect Your Tap: A Quick Check for Lead. It is available at: https://www.epa.gov/ground-water-and-drinking-water/protect-your-tap-quick-check-lead.

Health effects of lead

Exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or worsen existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these negative health effects. Adults can have increased risks of heart disease, high blood pressure, and kidney, or nervous system problems.

Steps you can take to reduce lead in drinking water.

Below are recommended actions that you may take, separately or in combination, if you are concerned about lead in your drinking water. The list also includes where you may find more information and is not intended to be a complete list or to imply that all actions equally reduce lead in drinking water.

Use filters properly. Using a filter can reduce lead in drinking water. If you use a filter, it should be certified to remove lead. Read any directions provided with the filter to learn how to properly install, maintain, and use your cartridge and when to replace it. Using the cartridge after it has expired can make it less effective at removing lead. Do not run hot water through the filter. For more information on facts and advice on home water filtration systems, see EPA's https://www.epa.gov/water-research/consumer-tool-identifying-point-use-and-pitcher-filters-certified-reduce-lead.

Clean your aerator. Regularly clean your faucet's screen (also known as an aerator). Sediment, debris, and lead particles can collect in your aerator. If lead particles are caught in the aerator, lead can get into your water.

Use cold water. Do not use hot water from the tap for drinking, cooking, or making baby formula as lead dissolves more easily into hot water. Boiling water does not remove lead from water.

Run your water. The more time water has been sitting in pipes providing water to your home, the more lead it may contain. Before drinking, flush your home's pipes by running the tap, taking a shower, doing laundry, or doing a load of dishes. The amount of time to run the water will depend on whether your home has a

Mail; City Website

lead service line or not, as well as the length and diameter of the service line and the amount of plumbing in your home. Residents may contact us at (704) 629-5542 for recommendations about flushing times in their community.

Learn what your service line material is. Contact us at (704) 629-5542 or a licensed plumber to determine if the pipe that connects your home to the water main (called a service line) is made from lead, galvanized, or other materials. Protect Your Tap: A quick check for lead is EPA's on-line step by step guide to learn how to find lead pipes in your home.

Learn about construction in your neighborhood. Contact us at (704) 629-5542 to find out about any construction or maintenance work that could disturb your service line. Construction may cause more lead to be released from a lead service line or galvanized service line if present.

Have your water tested. Contact us, your water utility, at (704) 629-5542 to learn how to have your water tested and to learn more about the lead levels in your drinking water. Alternatively, you may contact a certified laboratory to have your water tested for lead. A list of certified laboratories is available at https://bessemercity.com/lead-copper-service-inventory-project/. Note, a water sample may not adequately capture or represent all sources of lead that may be present. For information on sources of lead that include service lines and interior plumbing, please visit https://www.epa.gov/ground-water-and-drinking-water/basic-information-about-lead-drinking-water#getinto.

Get your child tested to determine lead levels in their blood.

Although there is no confirmation of having a lead service line, you may wish to speak with a healthcare provider to see if your child's blood lead level is elevated and/or if there is a need for blood testing, if you are concerned about potential exposure. Please visit https://www.cdc.gov/nceh/lead/advisory/acclpp/actions-blls.htm for information on these actions.

For information about potential financing solutions to assist property owners with replacement of lead service lines, please contact us at (704) 629-5542.

For more information on reducing lead exposure from your drinking water and the health effects of lead, visit EPA's website at http://www.epa.gov/lead.

Service Line Material Notice Certification

The public water system named above hereby certifies that the Notice of Service Line Material has been provided to its consumers in accordance with all delivery, content, format and deadline requirements specified in 15A NCAC 18C .1507 [141.85(e)].
